

PRODUCT & MARKETING PLAN • NEXT 6 MONTHS

Jinder. Let the skills **speak.**

How Jinder moves from a working hackathon platform to a trusted, paying product: what we build, in what order, how we earn, and how we reach people.

PREPARED BY

Team Excelerate

HACKATHON 2026 • FUTURE OF WORK

October 2026

PROPOSAL

What's in this plan

01 Executive summary

The plan on one page

02 Where Jinder is today

What is built and what is missing

03 Users and opportunities

What our users need, turned into eight opportunities

04 Upcoming features

Nine features with problem, scope and success measure

05 Product roadmap

Six-month timeline and milestones

06 Business model

Free, Premium and partner revenue

07 Marketing plan

Campaign spirit, six signature moves, action plan

08 Success measures

North star and funnel targets

09 Beyond six months, risks and open questions

The plan on one page.

Australia hosts **680,582 international students**, yet **69% of employers** report a tech skills shortage. The talent is here; the filters are broken. Jinder matches people to jobs on verified skills, not pedigree — with anonymous profiles, explainable matching and a clear path to every job.

PRODUCT

Nine new features turn eight user needs into tools: trust first, a clear next step after a low match, skills beyond ICT, and hiring that fits the employer's existing work.

BUSINESS

Employers pay; talent is seen for free. Premium for employers, a light Premium for talent, and university and training-provider partners. No pay-to-rank.

MARKETING

"Let the skills speak." Six product-led moves let people see the value — translate a job title, take a blind hire challenge, audit past rejections.

NORTH STAR

Hires made through Jinder · first 5 hire stories by month 6

REVENUE

10 paying employers · 1 university licence

TRUST

≥ 80% of candidates "feel safe sharing my CV"

The plan at a glance

PHASE	PRODUCT	BUSINESS	MARKETING
M1-2 · Validate	Privacy Preview · Application Tracker · Any-Industry Translator starts	Pilot with universities and SME design partners	"Let the skills speak" — Translate My Job Title · film the Blind Hire Challenge
M3-4 · Launch	Match Coach · Smart Job Builder · Talent Alerts · Team Hiring Hub starts	Premium billing live · first revenue	"Your ATS missed them" — Blind Hire videos · ATS Rejection Audit · Reverse Job Fair
M5-6 · Grow	Skill Plan · Impact Dashboard · outcome re-ranking	University licence · training-provider referrals	"The data is on our side" — Hidden Talent Index · Skill Card referrals

A working platform, **ready to grow.**

The hackathon build is a complete, two-sided web platform: candidates build a translated skills profile and find jobs; employers post jobs and review anonymous, skill-ranked talent.

6

deterministic, explainable

What is built

AREA	CAPABILITY	STATUS
Profile & translation	CV and job-description upload (PDF/DOCX), rule-based skill translation, accept/edit skills	Built (ICT only)
Matching	F-01 skill match & fit • F-02 gap & readiness • F-03 job-to-job • F-04 benchmarking • F-05 talent feed • F-06 employer search	Built
Privacy	Anonymous aliases, shared-profile allowlist, identity shared only with consent, data export and delete	Built
Hiring flow	Apply, shortlist, interview slots, offer, feedback, notifications, email outbox	Built
Employer Premium	See every profile • invite talent • compare up to 5 profiles • pipeline charts	Built, no billing
Talent Premium	Skills to learn next • demand for your skills	Built, no billing
Operations	Admin console with live tables, traffic, data flow and read-only SQL	Built

What is missing

- **Reach beyond ICT** — many international graduates (like our persona Minh) work in business and operations.
- **A clear next step after a low match** — candidates see a gap but not the one skill that opens the most jobs.
- **Fit with employer workflows** — no team sharing, ATS export or calendar booking.
- **Real billing and real outcomes** — Premium is a demo switch; hiring results are not yet fed back into matching.

What our users **actually** ask.

We walked through the platform as each user, from the first visit to a hire, and wrote down their questions in their own words.

MT

Minh Tran, 26

 International graduate ·
Business & Ops

"Is this only for tech people? I'm in operations."

"Why is this one 62% and not 90%?"

"If I'm rejected, tell me why."

SW

Sarah Whitfield, 38

 Sole talent lead · 60-person
SME

"Will this replace my tool or sit alongside it?"

"I have 20 minutes a day for this."

"Can I share a shortlist with my manager?"

PR

Priya

University careers advisor

"How many of my graduates got jobs?"

"Which skills are they missing?"

"Is student data safe?"

Three findings. (1) Trust comes before features — privacy, cost and fairness are the first questions on both sides. (2) Candidates ask "why" and then "what next". (3) Employers fear extra work more than they want new features.

Eight opportunities

#	HOW MIGHT WE...	USER EVIDENCE	BECOMES FEATURE
01	build trust in the first 30 seconds?	"Who sees my CV?" · "Is it free?" · "Is this legal and fair?"	#13 Privacy Preview
02	turn a low match into a clear next step?	"Why 62%?" · "What one skill unlocks the most jobs?" · "Where do I learn it?"	#14 Match Coach · #15 Skill Plan
03	recognise skills beyond ICT?	"Is this only for tech people? I'm in operations."	#16 Any-Industry Translator
04	end the application black hole?	"Did anyone look?" · "Tell me why I was rejected."	#17 Application Tracker
05	fit into the employer's existing work?	"Sit alongside my tool" · "Share with my manager" · "10 emails to book"	#20 Team Hiring Hub
06	bring strong talent to the employer?	"20 minutes a day" · "Tell me when someone strong appears."	#19 Talent Alerts
07	help employers ask for the right skills?	"Am I asking for too much?" · "What do others ask for?"	#18 Smart Job Builder
08	prove hiring outcomes?	"Show my CEO." · "How many of my graduates got jobs?"	#21 Impact Dashboard

Nine features, each with a job to do.

Numbered #13–#21 to continue the original PRD (#1–7 MVP, #8–12 vision). Effort: S = small, M = medium, L = large.

#13 Privacy Preview

O1 Talent Free

PROBLEM

Candidates do not upload a CV until they trust who will see it.

WHAT IT DOES

Before uploading anything, the candidate sees exactly what an employer will see: an anonymous alias, translated skills, and no name, email or country.

USER STORY

As Minh, I want to see what employers will see before I upload, so I feel safe sharing my CV.

BUILDS ON

Shared-profile allowlist and anonymous aliases (built)

SUCCESS MEASURE Visit → completed profile rate **EFFORT** S **TIMING** M1

#14 Match Coach

O2 Talent Free "why not" · Premium "what if"

PROBLEM

A low match score with no explanation feels like another silent rejection.

WHAT IT DOES

For every job: the top 3 reasons the match is not higher ("SQL level 2, job needs 4"), and a simulator — "learn Power BI → this job 62 → 78, and 14 more jobs open".

USER STORY

As Minh, I want to know the one skill that opens the most doors, so I spend my time well.

BUILDS ON

F-01 Skill match, F-02 Gap & readiness (re-run with an imagined skill, nothing stored)

SUCCESS MEASURE Talent who add a skill or start a course within 30 days **EFFORT** M **TIMING** M2–M4

#15 Skill Plan

O2 Talent Premium

PROBLEM

Knowing the gap is not enough; candidates do not know where to learn or how long it takes.

WHAT IT DOES

Turns the Match Coach result into a step-by-step learning plan: 3 skills · about 4 months, with partner courses, time and cost.

USER STORY

As Minh, I want a realistic plan to become job-ready, so I can set expectations.

BUILDS ON

F-02 months to close, taxonomy learnability

SUCCESS MEASURE Course click-through → skill added to profile **EFFORT** M **TIMING** M4–M6

#16 Any-Industry Translator

O3 Talent Free

PROBLEM

The platform covers ICT only, but many international graduates work in business, operations and service.

WHAT IT DOES

Extends skill translation to business, operations and service roles, with cross-industry links (e.g. Ops Manager ↔ Project Coordinator).

USER STORY

As Minh (operations background), I want my experience recognised even though I am not a tech worker.

BUILDS ON

Rule-based translation, ICT taxonomy structure

SUCCESS MEASURE Non-ICT CVs with 5+ skills recognised **EFFORT** L **TIMING** M1–M4

#17 Application Tracker

O4 Talent Free

PROBLEM

Applicants hear nothing back and cannot learn from rejection.

USER STORY

As Minh, I want to know where each application stands and why it ended.

WHAT IT DOES

A live timeline per application (applied → viewed → shortlisted → interview → result). When an employer closes an application, they pick a skill-based reason in one click.

BUILDS ON

Application history, feedback and notifications (built)

SUCCESS MEASURE Closed applications with feedback · talent return rate **EFFORT** S **TIMING** M1-M3

#18 Smart Job Builder

O7 Employer Free hints · Premium benchmarks

PROBLEM

Job posts ask for too much or the wrong skills, so good candidates never match.

USER STORY

As Sarah, I want to know if my requirements are realistic before I post.

WHAT IT DOES

While posting, suggests skills and levels from similar jobs, and warns “only 3% of talent meet all 9 must-haves”.

BUILDS ON

Job-description frequency (PRD #4), talent pool

SUCCESS MEASURE Jobs edited after a warning · matches per job **EFFORT** M **TIMING** M2-M4

#19 Talent Alerts

O6 Employer Premium

PROBLEM

Recruiters have 20 minutes a day and cannot search every day.

USER STORY

As Sarah, I want strong candidates to come to me.

WHAT IT DOES

Notifies the recruiter when a new profile matches a saved job above a chosen level (e.g. 85%+), by email or in the app.

BUILDS ON

F-06 talent search, saved candidates, email outbox (built)

SUCCESS MEASURE Alert → profile open rate **EFFORT** S **TIMING** M3-M5

#20 Team Hiring Hub

O5 Employer Premium (per seat)

PROBLEM

Hiring is a team decision, but tools are single-user and sit outside existing systems.

USER STORY

As Sarah, I want to share a shortlist with my hiring manager and book interviews without 10 emails.

WHAT IT DOES

Shared shortlists, team votes per skill, ATS export (e.g. Workday, JobAdder) and calendar booking for interviews.

BUILDS ON

Human-in-the-loop review, interview slots (built)

SUCCESS MEASURE Jobs with 2+ team members active **EFFORT** M-L **TIMING** M3-M6

#21 Impact Dashboard

O8

Employer · University

Premium · University licence

PROBLEM

Recruiters and universities must prove results to leadership.

USER STORY

As a university careers advisor, I want to show how many international graduates got jobs.

WHAT IT DOES

Time-to-hire, funnel by stage, a fair-hiring report (shortlists made on skills only) and graduate outcomes for university partners.

BUILDS ON

Pipeline charts (built), hiring outcome feedback

SUCCESS MEASURE Dashboards opened monthly · licences signed

EFFORT M

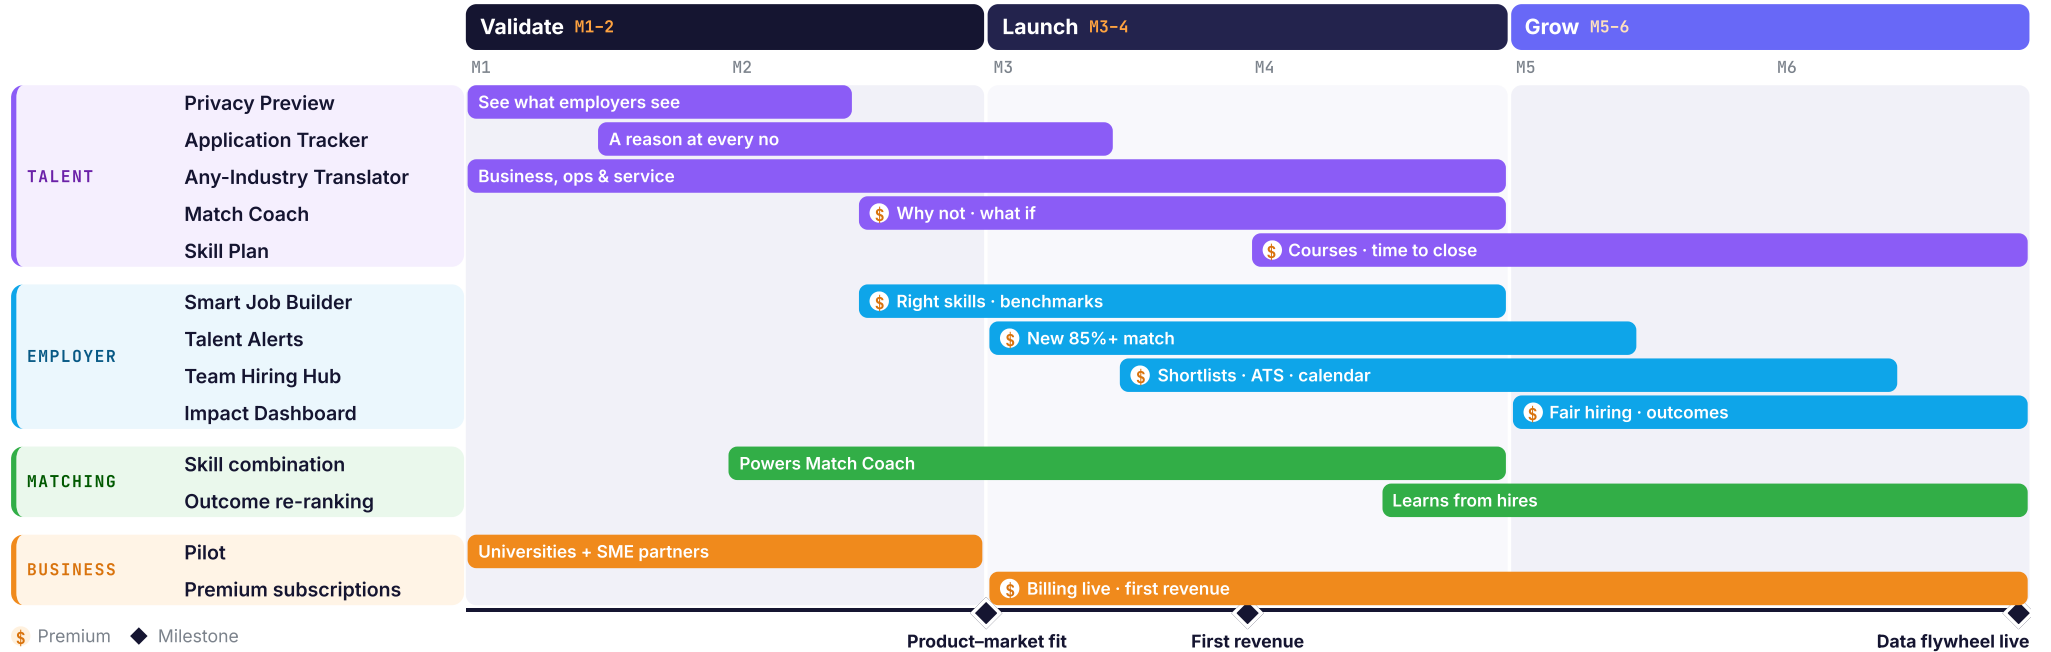

TIMING M5–M6

Engine work behind the features. The skill combination engine (“people with skill A usually also have B”) powers Match Coach and Talent Alerts. Outcome-based re-ranking uses real hires to improve matching over time — the data flywheel.

Later (after 6 months): verified skill badges · self-learning transferable skills · career path explorer · multilingual CV upload.

From pilot to paying platform.

Three phases of two months. Each feature group has its own colour; \$ marks a Premium or revenue item.

M1-2 • VALIDATE

Prove skill translation gets people hired. Pilot with universities and SME design partners; ship trust and transparency features first.

M3-4 • LAUNCH

Employers pay for speed and reach. Premium billing goes live with Talent Alerts and the Team Hiring Hub; Match Coach opens to all.

M5-6 • GROW

Every hire makes matching smarter. Outcome re-ranking, Skill Plan and the Impact Dashboard turn results into proof and revenue.

Employers pay. Talent is seen for free.

No pay-to-rank. Premium never moves a candidate up a list, and a candidate never pays to be visible. This protects the fairness promise at the heart of the product.

CUSTOMER	FREE	PREMIUM • BUILT TODAY	PREMIUM • NEXT 6 MONTHS
Employers <i>main revenue</i>	Post jobs • top 5 profiles per job • per-skill match • Smart Job Builder hints	See every profile • invite talent to apply • compare up to 5 profiles • pipeline charts	Talent Alerts • Team Hiring Hub (per seat) • Smart Job Builder benchmarks • Impact Dashboard
Candidates	Profile, translation, applying • match and path to every job • Match Coach “why not” • Application Tracker • Privacy Preview	Skills to learn next • demand for your skills	Match Coach “what if” • Skill Plan
Partners	—	—	University licence (Impact Dashboard for graduate outcomes) • referral fee from training providers (Skill Plan courses)

Why this model

- **The pain sits with employers.** The 69% skills shortage is an employer problem, so employers pay for faster, clearer shortlists.
- **Talent supply must stay free.** The more candidates join, the more valuable the platform is to employers.
- **Partners add a second and third income** that also brings in more candidates (universities) and closes skill gaps (training providers).

Price points are not set in this plan; they will be tested with design partners during months 1–2.

Let the skills speak.

Show, don't tell. People do not change their minds because we tell them they are biased or overlooked. They change it when they *see* it. Every move lets people experience the moment when skills are seen before identity — the marketing *is* the product.

• Show, don't tell	TALENT invisible → Recognised	EMPLOYERS "No one out there" → "They were here all along"
AUDIENCE	POSITIONING	
Candidates	"Your skills, recognised. Your identity, protected." Free, always.	
Employers	"See the talent your ATS filters out."	
Universities	"Proof your graduates get hired."	

Tone: confident, not preachy · warm and human · proof over promise. Not: guilt-tripping employers, a "poor migrants" story, AI hype, or fairness claims without proof.

Six signature moves

M1	Translate My Job Title	Talent
	"See your experience in Australian terms."	
INSIGHT	International graduates do not know what their overseas job is called in Australia, and nothing answers this.	EXPECTATION
	A free, no-signup tool that answers in 10 seconds is shared in student group chats; some users continue to a full profile.	
	10% translation → sign-up rate by M2	2,000 translations run by M6
		15% of translations shared as a card by M6
M2	Skill Card	Talent
	"Share your skills, not your name."	
INSIGHT	Talent want to show what they can do but fear bias: "my skills, not my name and country".	EXPECTATION
	An anonymous, good-looking skills card is safe to share; each share brings in people with similar backgrounds.	
	25% of new sign-ups from shares by M6	20% of profiles share a card by M6
M3	Blind Hire Challenge	Employers
	"See your own bias."	
INSIGHT	Recruiters believe they are fair, but they judge CVs in seconds by name, school and job title.	EXPECTATION
	Seeing that they would reject their own top pick creates a memorable "aha"; the short videos spread on LinkedIn.	
	5/10 recruiters pick differently when blind by M2	30 employer sign-ups from the videos by M6

M4 ATS Rejection Audit

Employers

"See who you missed."

INSIGHT

Employers pay for what they can measure; their own missed candidates convince more than an industry statistic.

EXPECTATION

Proof of value from their own data leads straight to a Premium trial.

10/40 audits start a Premium trial by M4

60% of audits find an 80%+ match by M4

30% of trials convert to paid by M6

M5 Reverse Job Fair

Universities

"Be seen before your CV."

INSIGHT

Students hand out CVs at fairs and hear nothing back; universities want events that produce results.

EXPECTATION

Employers pitch to talent while skills are matched live; universities co-host because it produces interviews.

8+ interviews booked per event by M4

100 students matched per event by M4

1 university converts to a paid licence by M6

M6 Hidden Talent Index

Market

"See the talent already here."

INSIGHT

Media and universities discuss the "skills shortage" with no data on skills that already exist.

EXPECTATION

A short quarterly report from platform data makes Jinder a quoted source at almost no cost.

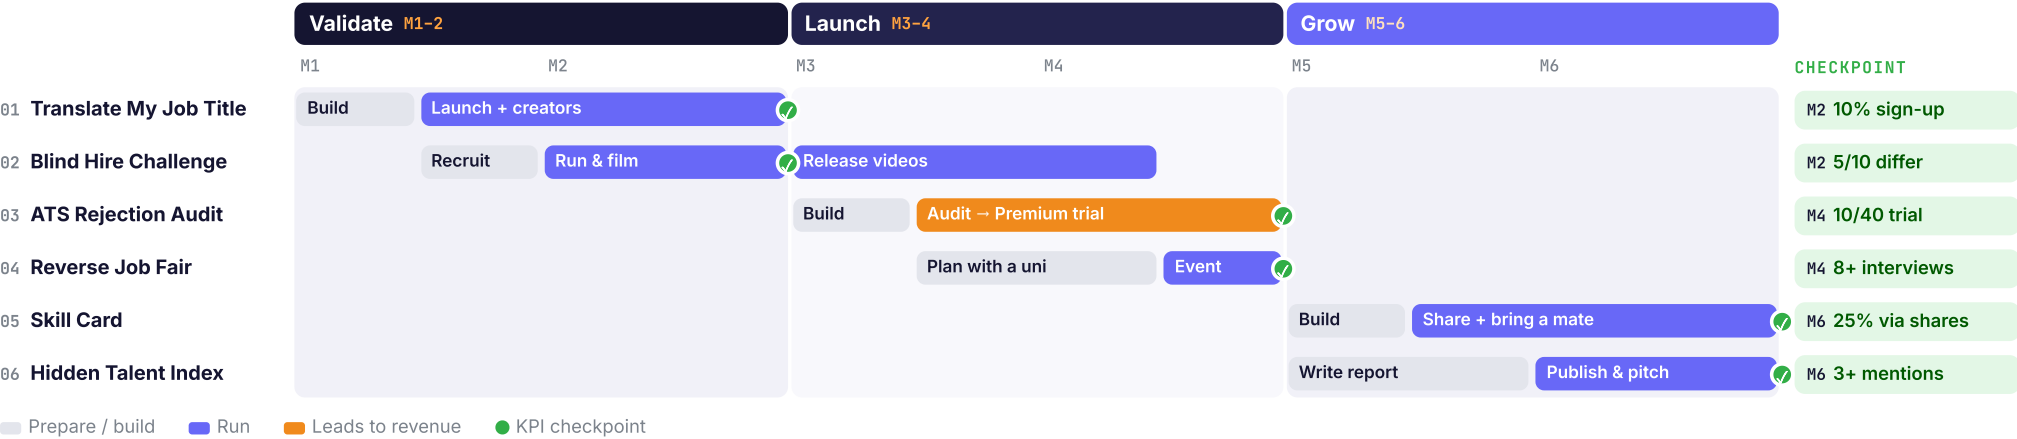

3+ media or industry mentions by M6

5 inbound partner enquiries by M6

Amplifier: international-student creators use Translate My Job Title and the Skill Card on camera, in their own language.

Action plan: build, launch, check.

Each move follows the same pattern — prepare or build, run, then check its KPI. **Decision rule:** at each checkpoint, a move that reaches less than half of its target is stopped or reworked before more effort goes into it.

Action plan in detail.

Timing is shown in months and weeks from the start of the plan.

MOVE	PREPARE / BUILD	RUN	CHECKPOINT	KPI TARGET
Translate My Job Title	M1 wk 1–2: build the page on the existing translation engine	M1 wk 3 – M2: launch in student community groups and with creators	End of M2	10% translation → sign-up
Blind Hire Challenge	M1 wk 3–4: recruit 10 SME design partners	M2: run and film 10 sessions · M3 – M4 wk 2: release videos	End of M2	5 of 10 pick differently when blind
ATS Rejection Audit	M3 wk 1–2: build the bulk-upload audit	M3 wk 3 – M4: free audit, then a Premium trial	End of M4	10 of 40 audits start a trial
Reverse Job Fair	M3 wk 3 – M4 wk 2: plan with a partner university	M4 wk 3–4: run the event	End of M4	8+ interviews booked
Skill Card	M5 wk 1–2: build sharing and “bring a mate” referrals	M5 wk 3 – M6: promote sharing to every new profile	End of M6	25% of new sign-ups from shares
Hidden Talent Index	M5 – M6 wk 2: pull platform data, write the report	M6 wk 3–4: publish and pitch to media and universities	End of M6	3+ media or industry mentions

How we will know it works.

One north-star metric, supported by a simple funnel. Targets are planning assumptions for the first six months, to be checked during the pilot.

STAGE	METRIC	TARGET BY MONTH 6
North star	Hires made through Jinder	First 5 hire stories
Awareness	Translations run · Blind Hire video views	2,000 · 20,000
Acquisition	Candidate sign-ups · employer sign-ups	800 · 30
Activation	Completed profiles · jobs posted	60% · 50
Revenue	Paying employers · university licences	10 · 1
Referral	New sign-ups from shares or referrals	≥ 25%
Trust	Candidates who agree "I feel safe sharing my CV"	≥ 80%

Milestones

WHEN	MILESTONE	WHAT PROVES IT
End of M2	Product-market fit (early signal)	Design partners use Jinder weekly; translation → sign-up ≥ 10%
End of M3	First revenue	First employers pay for Premium
M6	Data flywheel live	Hiring outcomes feed back into matching; first 5 hire stories

Year one: focus, not expansion.

In 12 months, Jinder helps international graduates get fair, skills-based access to entry and mid-level jobs, with a small group of employers and universities who trust it and use it every week.

MONTHS 7-12	WHAT WE DO
Improve	Fix what pilot users found hard; make Match Coach and Talent Alerts more accurate using hiring outcomes.
Prove	Measure hires, time saved and repeat use; turn them into case studies.
Earn	Make Premium reliable for employers; test one university licence renewal.
One new thing	Add one item from the “Later” list, chosen from pilot feedback (likely career path explorer or verified skill badges).

Deliberately not in year one: national rollout, recruitment agencies, open API, credential-body partnerships, all industries.

Risks and how we reduce them

RISK	MITIGATION
Employers do not pay	Prove value with their own data first (ATS Rejection Audit); start with design partners before billing.
Too few candidates for a strong match pool	Talent stays free; product-led moves (Translate My Job Title, Skill Card) are built to spread.
Beyond-ICT taxonomy takes longer	Start the data work in month 1 and add one area (business & operations) before any other.
Not enough hires to train the flywheel	Collect hiring outcome feedback from day one; keep rule-based matching as the reliable base.
A privacy or fairness incident	Zero-PII design, consent-only identity, no pay-to-rank, humans make every decision; review against the Privacy Act before launch.

Open questions

- Which non-ICT area comes first for the Any-Industry Translator (business operations, customer service)?
- What price points do we test for employer Premium and candidate Premium?
- Which university and SME design partners do we approach first?
- Which ATS integrations matter most to SMEs?
